Lead Intake & Duplicate Verification System

System Architecture & Verified Build Proof · Checks for repeat submissions within a 24-hour window before downstream HubSpot contact sync and Outlook notifications.

MASTER ARCHITECTURE & OPERATIONAL FLOW

How Unchecked Repeat Submissions Can Clutter CRM Records

Separating pre-submission 24-hour verification from record updates protects data quality without blocking prospects.

Unchecked Repeat Submissions

Without duplicate checking, repeat form submissions can create redundant database rows or duplicate CRM contacts.

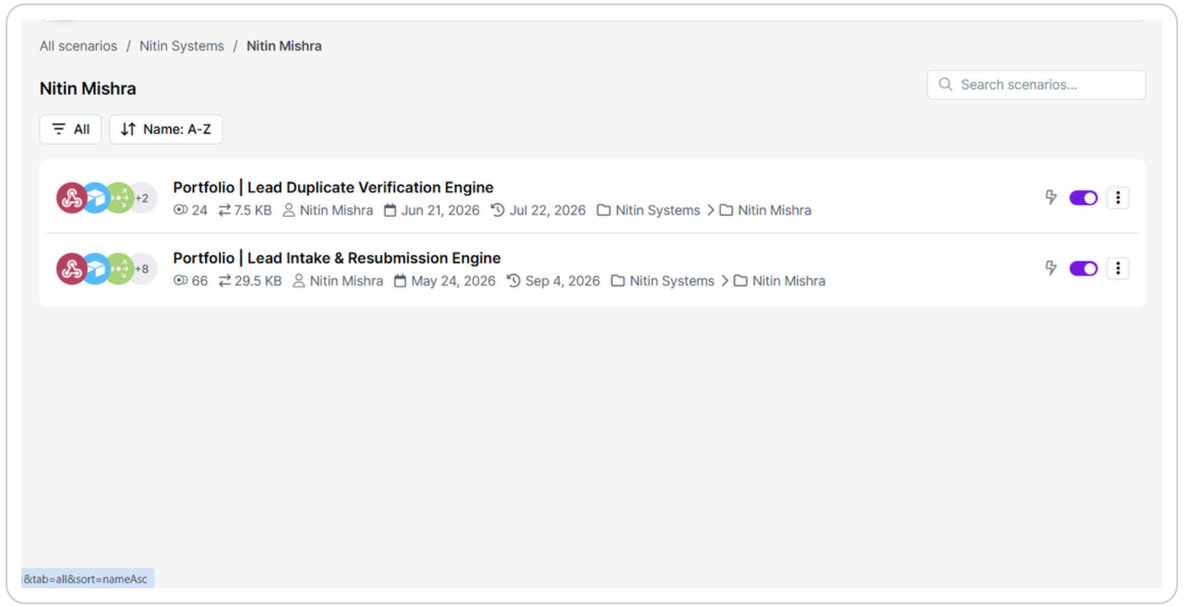

Split Submission Context

Updated project requirements and repeat inquiry details fragment across duplicate contact records instead of updating the existing lead profile.

Decoupled 2-Scenario Architecture

Scenario 02 performs the pre-submission Airtable lookup and returns the duplicate decision through a webhook response. Scenario 01 handles Airtable record updates or creation, HubSpot contact sync, and Outlook notifications.

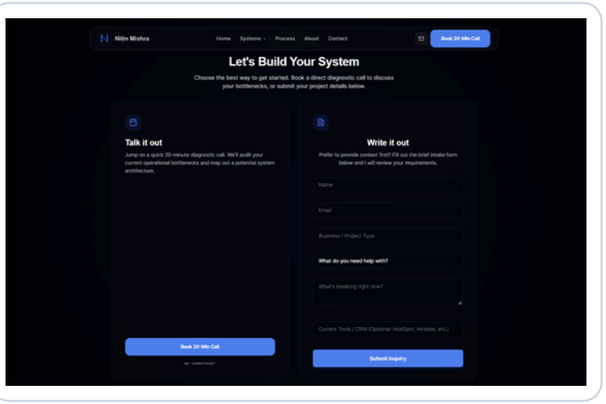

MAKE.COM SCENARIO INVENTORY · 2 INSTANT WEBHOOKS

Built sequentially: Scenario 01 (Lead Intake & Resubmission Engine, May 2026) followed by Scenario 02 (Lead Duplicate Verification Engine, Jun 2026). At runtime, Scenario 02 executes first before submission writes.

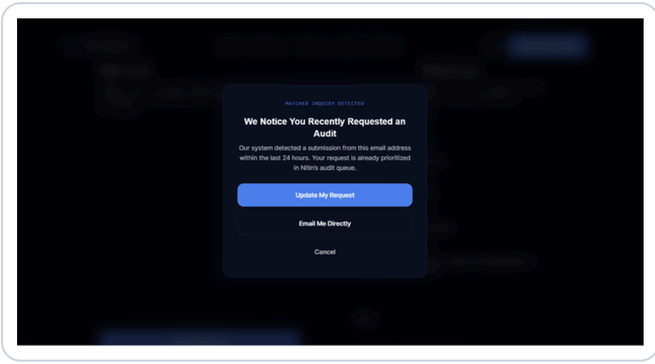

Guided Intake Journey With Non-Blocking Duplicate Prompts

Captures scoped project requirements, surfaces 24-hour match options via modal, confirms receipt, and links consultation booking.

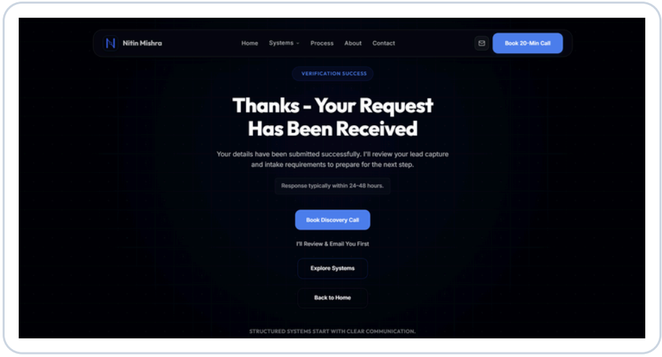

01 · INTAKE FORM

Split intake layout collecting Name, Email, Business Type, Required Help, Primary Challenge, and Current Tools (no phone field collected).

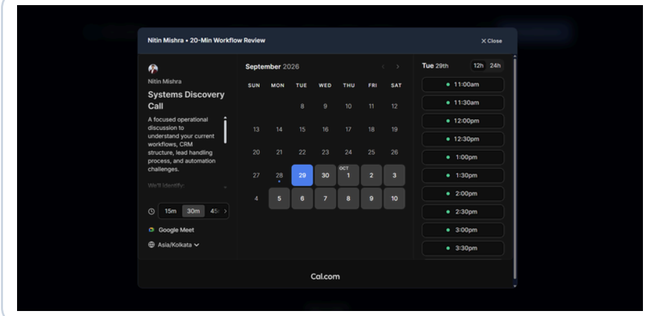

02 · 24H DUPLICATE MODAL

Triggered when submitted email matches within 24 hours; offers **Update My Request**, **Email Me Directly**, or **Cancel**.

03 · VERIFICATION CONFIRMATION

Confirms receipt ("Response typically within 24-48 hours") with direct paths to schedule or continue exploring systems.

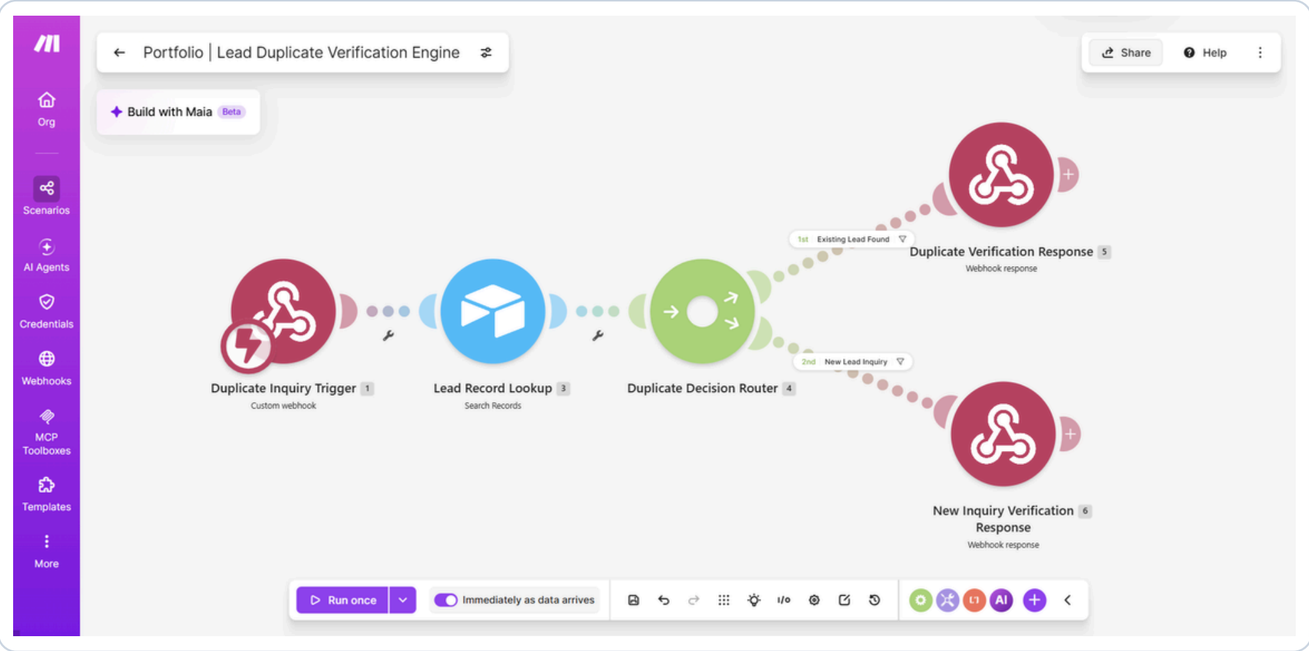

04 · CONSULTATION BOOKING

Cal.com consultation modal (15m, 30m, and 45m Google Meet options). Operates as part of intake, separate from the verification engine.

Pre-Submission 24-Hour Lookup & Fail-Open Resilience

Verifies incoming email addresses against Airtable and returns a binary webhook response before any CRM record is written.

MAKE.COM · PORTFOLIO | LEAD DUPLICATE VERIFICATION ENGINE

TRIGGER & LOOKUP

Duplicate Inquiry Trigger receives the pre-submission email and runs **Lead Record Lookup (Airtable: Search Records)** over the 24-hour window.

BINARY WEBHOOK RESPONSE

Duplicate Decision Router returns either **Existing Lead Found** (opens the 24h Duplicate Modal) or **New Lead Inquiry** (proceeds normally).

ZERO SIDE EFFECTS & FAIL-OPEN PATH

Scenario 02 performs no database edits, HubSpot calls, or emails. If the lookup webhook errors, intake follows the fail-open path (**Bypassed (Webhook Failure**) and proceeds to Scenario 01 without blocking on the duplicate check.

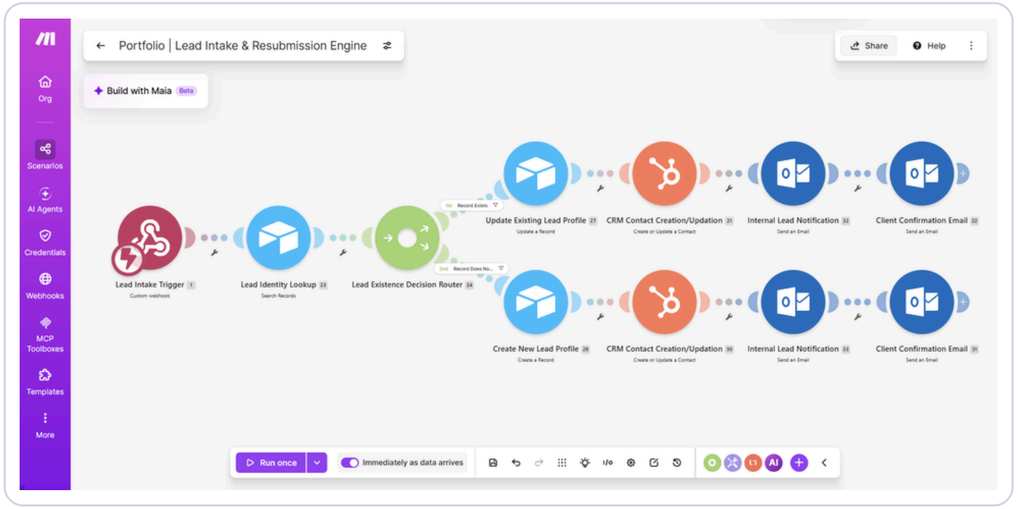

FAIL-OPEN PATH: Checks for duplicate lead submissions within a 24-hour window before updating CRM records. If the lookup webhook fails, the submission follows the fail-open path, is marked Bypassed (**Webhook Failure**), and proceeds to Scenario 01.

Conditional Record Routing, Contact Sync & Email Dispatch

Executes Airtable updates or inserts, synchronizes selected fields to HubSpot Contacts, and triggers dual Outlook notifications.

MAKE.COM · PORTFOLIO | LEAD INTAKE & RESUBMISSION ENGINE

BRANCH 1: RECORD EXISTS · BRANCH 2: RECORD DOES NOT EXIST

IDENTITY LOOKUP & ROUTER

Lead Intake Trigger executes **Lead Identity Lookup (Airtable: Search Records)** and routes on **Lead Existence Decision Router** (Record Exists vs. Record Does Not Exist).

AIRTABLE + HUBSPOT CONTACT SYNC

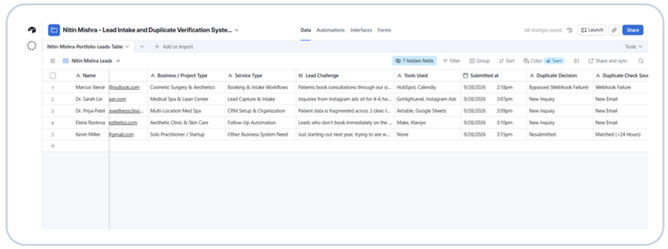

Branch 1 updates the existing Airtable profile; Branch 2 creates a new row. Both branches call **HubSpot: Create or Update a Contact** (contact properties only, no Deal module).

DUAL OUTLOOK NOTIFICATIONS

On successful execution, both paths trigger an Internal **Lead Notification** and a **Prospect Confirmation Email** through Outlook.

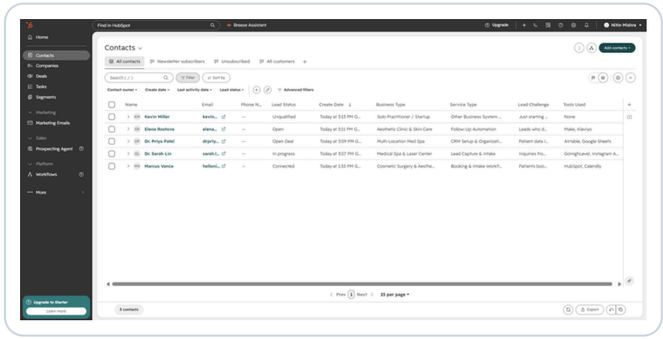

Synchronized Airtable Records, HubSpot Contacts & Outlook Alerts

Sample test entries from 9/28/2026 verifying new lead logging, 24h resubmission updates, fail-open logging, and automated emails.

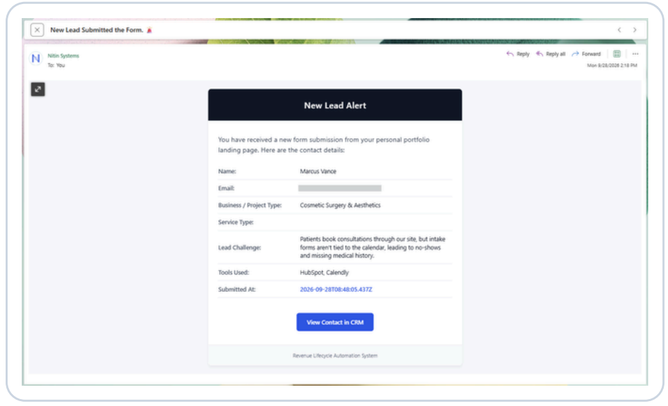

AIRTABLE · MASTER INTAKE TABLE

Nitin-Mishra-Portfolio-Leads-Table (5 test rows) logging Duplicate Decision and Check Source: 3 New Inquiries, 1 Resubmitted (**Matched (<24 Hours)**, and 1 fail-open test (**Bypassed (Webhook Failure)**).

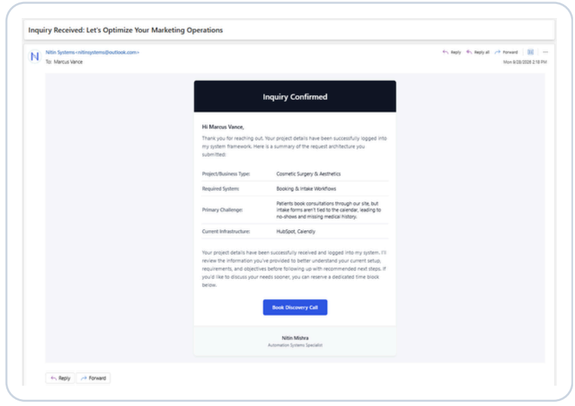

HUBSPOT · CONTACTS LAYER

HubSpot Contacts updated with selected fields: **Business Type**, **Service Type**, **Lead Challenge**, and **Tools Used**. **Phone Number** remains (not collected).

OUTLOOK · INTERNAL TEAM ALERT

Instant internal notification ("New Lead Submitted the Form.") displaying prospect intake details and a **View Contact in CRM** button.

OUTLOOK · PROSPECT CONFIRMATION

Automated confirmation from **nitinsystems@outlook.com** summarizing inquiry scope with a **Book Discovery Call** button.

Verified Implementation Scope & System Boundaries

Clear accounting of tested capabilities versus intentionally out-of-scope features in this self-initiated design.

VERIFIED & DOCUMENTED

- Two Make.com instant-webhook scenarios decoupling 24h pre-check lookup from downstream execution.
- Interactive 24h Duplicate Modal (**Update My Request**, **Email Me Directly**, **Cancel**).
- Verified fail-open handling: lookup failures are marked Bypassed (**Webhook Failure**), and intake proceeds to Scenario 01.
- Selective HubSpot Contacts sync plus consistent Nitin Systems Outlook internal alert and prospect confirmation.
- Integrated Cal.com consultation modal (**15m | 30m | 45m**) as part of the frontend intake experience.

EXPLICIT BOUNDARIES

- **Email-only matching key:** Evaluates submitted email within 24 hours; no phone capture, E.164 normalization, or cross-domain matching.
- **HubSpot Contacts only:** Uses Create or Update a Contact; no automated HubSpot Deal creation or sales pipeline stages.
- **Single-table Airtable base:** Stores submissions and duplicate-decision fields in Nitin-Mishra-Portfolio-Leads-Table rather than a multi-table index.
- **Portfolio test build:** Tested with 5 sample submissions (9/28/2026) and documented with real screenshots and a 14-page visual case study.
